

Querétaro, Querétaro, March 4th, 2022.

Announcement 001/22.

GMXT carries out improvement works on a railway bridge structure in Querétaro.

- *The project is being carried out under strict safety measures, with no risk whatsoever to the general public or the urban environment.*

As a follow-up to the preventive work carried out in 2021 and in compliance with current regulations on transportation, Grupo México Transportes (GMXT) is conducting improvement work on the railway bridge located on the Morelos line at kilometer 242 + 380, at the intersection of Bernardo Quintana Boulevard.

Responding to recommendations from the General Directorate of Technical Services of the Ministry of Infrastructure, Communications, and Transportation (SICT), which approved and authorized the work, the company is raising the bridge to increase the clearance and thus prevent potential impacts from tall, heavy vehicles that could damage the superstructure.

The project is being carried out under strict safety measures, with no risk whatsoever to the general public or the urban environment. Work is being conducted every day of the week during night shifts from 22:00 to 6:00 hours to expedite the project and minimize disruptions to mobility in the area.
